P.A.L.S.S. Team Member Report

Name: Matthew Prescott

This week's role: There were no official roles assigned this week due to the lack of familiarity within our group of how to use the tools given to us.

Next week's roles: For Sprint 2, I will be the Product Owner. This means I will make sure the backlog is up to date and organized, as well as keep the sprint on track.

Duties performed this week: This week I created the use case model document for the user interface. What this entailed was me going through each use case from our diagram and describing the steps taken by the actor and the system.

Issues encountered: The use of GitHub is new for me, so it took a while to learn the different niches of it. Creating use case descriptions is new to me and something I have not learned before this class, so it took me a while to make the document as I was learning along the way.

Issues resolved: I was able to become somewhat familiar with GitHub and able to upload documents, merge, pull, and push without issue.

Percentage contribution: 18%

Weaknesses:
- Procrastinator
- Grammar

Strengths:
- Willing to help wherever needed
- Finished work efficiently

Name: Matthew Ackley

This week's role: No official roles were assumed this week, as a result of a wide discrepancy between individual group members' familiarity with the tools being used.

Next week's roles: For Sprint 2, I will be a developer, and will be working with Flutter to begin the creation of the app. I will also continue updating documents of interest, including adding more exception handling to our use cases.

Duties performed this week: This week I created the Use Case Document, including both diagrams and the financial portion of the descriptions. I also helped with editing and finalizing several of the other documents, and helped organize the group and meeting points.

Issues encountered: Most of the issues encountered came in terms of organization of the use case diagrams, which turned out fairly nicely in the end. Other issues just came in the form of agreeing to the format of the app (which was solved through simple communication) and in the form of unfamiliarity with GitHub.

Issues resolved: Finalized format of the use case diagrams, agreed upon general app format, and familiarized ourselves with GitHub.

Percentage contribution: 20%

Weaknesses:
- Procrastinator

Strengths:
- Took on the creation of difficult diagrams
- Well organized

Name: Aiden Lammert

This week's role: Due to our lack of familiarity with important development concepts such as Git, we were not able to assign scrum roles this week.

Next week's role: I will be a developer next week.

Duties performed this week: My main job this week was to create and organize all the documents so that we all knew what needed to happen to fill this deliverable's requirements. Additionally, I was in charge of filling out the sprint and project backlog spreadsheets and compiling each of the finished documents into a folder to help keep track of what documents have been completed and which still need work. Finally, I started up our Kanban board using Zenhub and filled it with the initial tasks on which we have decided at this time.

Issues encountered: It had been a while since using Git along with users other than myself, so I had to re-familiarize myself with the tool.

Issues resolved: None

Percentage contribution: 26%

Weaknesses:
- Procrastinator

Strengths:
- Led initial creation of documents
- Efficiently created an outline of several important ideas

Name: Durgin Sweet

This week's role: This week, our group did not use formal scrum positions, since the group as a whole was primarily concerned with familiarizing ourselves with Github and Kanban, as well as finalizing the details of how our group wanted to run the project.

Next week's roles: I'll be the Scrum Master next week

Duties performed this week: Primarily worked on documentation, primarily worked on the second half of the SRS. I also was responsible for the creation of the team Github repository and group.

Issues encountered: None

Issues resolved: None

Percentage contribution: 18%

Weaknesses:
- Procrastinator

Strengths:
- Helped keep the group organized
- Enthusiastic about future progress

Name: Joshua Schaff

This week's role: During this week, our team did not perform proper scrum roles as a result of not understanding the tools used for the project.

Next week's role: I will work on the development team next week and try to focus on the creation of the user system.

Duties performed this week: This week I primarily worked on creating the System Requirements Document. I focused mainly on the first half of the document describing the overview, scope and main functions of the Xpendit application.

Issues encountered: I encountered issues getting GitHub to work properly as it was my first time using the services.

Issues resolved: Over time, I have become more familiar with how to use GitHub.

Percentage contribution: 18%

Weaknesses:
- Procrastinator
- Easily distracted

Strengths:
- Got the job done when it came down to it
- Thinks differently
